SELECT Query

SELECT col1, col2
FROM table
JOIN table2 ON table1.col = table2.col
WHERE condition
GROUP BY column_name
HAVING condition
ORDER BY col1 ASC|DESC;

SELECT Keywords

DISTINCT: Removes SELECT DISTINCT product_name duplicate results FROM product;

BETWEEN: Matches a SELECT product_name value between two FROM product

other values (inclusive) WHERE price BETWEEN 50 AND 100;

IN: Matches to any of the values in a list

SELECT product_name FROM product WHERE category IN

('Electronics', 'Furniture');

LIKE: Performs
wildcard matches using
or %

SELECT product_name
FROM product
WHERE product_name
LIKE '%Desk%";

Joins

SELECT t1.*, t2.*
FROM t1
join_type t2 ON t1.col = t2.col;

Table 1 Table 2

A A
B
C
D

INNER JOIN: show all matching records in both tables.

A A B

LEFT JOIN: show all records from left table, and any matching records from right table.

A A B B

RIGHT JOIN: show all records from right table, and any matching records from left table.

A A B B D

FULL JOIN: show all records from both tables, whether there is a match or not.

A A B B

D

CASE Statement

Simple Case CASE name

WHEN 'John' THEN 'Name John'
WHEN 'Steve' THEN 'Name Steve'
ELSE 'Unknown'

END END

Searched Case

CASE

WHEN name='John' THEN 'Name John'
WHEN name='Steve' THEN 'Name Steve'
ELSE 'Unknown'
END

Common Table Expression

WITH queryname AS (
SELECT col1, col2
FROM firsttable)
SELECT col1, col2..
FROM queryname...;

Modifying Data

Insert INSERT INTO tablename (col1, col2...)
VALUES (val1, val2);

Table INSERT INTO tablename (col1, col2...)

SELECT col1, col2...

Insert Multiple INSERT ALL
Rows INTO tablename (col1, col2)
VALUES (valA1, valB1)
INTO tablename (col1, col2)
VALUES (valA2, valB2)

SELECT * FROM dual;

Update UPDATE tablename SET col1 = val1

FROM tablename t
INNER JOIN table x
ON t.id = x.tid
WHERE condition;

Delete DELETE FROM tablename WHERE condition;

Indexes

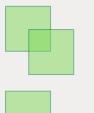

Create Index CREATE INDEX indexname ON tablename (cols);

Drop Index DROP INDEX indexname;

Set Operators

UNION: Shows unique rows from two result sets.

UNION ALL: Shows all

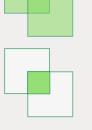

rows from two result sets.

INTERSECT: Shows rows that

exist in both result sets.

the second.

EXCEPT: Shows rows that exist in the first result set but not

uit S

Aggregate Functions

- SUM: Finds a total of the numbers provided
- COUNT: Finds the number of records
- AVG: Finds the average of the numbers provided
- MIN: Finds the lowest of the numbers provided
- MAX: Finds the highest of the numbers provided

Common Functions

- LENGTH(string): Returns the length of the provided string
- INSTR(string, substring, [start_position], [occurrence]): Returns the position of the substring within the specified string.
- TO_CHAR(input_value, [fmt_mask], [nls_param]): Converts a date or a number to a string
- TO_DATE(charvalue, [fmt_mask], [nls_date_lang]): Converts a string to a date value.
- TO_NUMBER(input_value, [fmt_mask], [nls_param]): Converts a string value to a number.
- ADD_MONTHS(input_date, num_months): Adds a number of months to a specified date.
- SYSDATE: Returns the current date, including time.
- CEIL(input_val): Returns the smallest integer greater than the provided number.
- FLOOR(input_val): Returns the largest integer less than the provided number.
- ROUND(input_val, round_to): Rounds a number to a specified number of decimal places.
- number of decimals or format.REPLACE(whole_string, string_to_replace, [replacement_string]):

TRUNC(input_value, dec_or_fmt): Truncates a number or date to a

Replaces one string inside the whole string with another string.
SUBSTR(string, start_position, [length]): Returns part of a value, based on a position and length.

Create Table

Create Table with Constraints

```
CREATE TABLE tablename (
   column_name data_type NOT NULL,
   CONSTRAINT pkname PRIMARY KEY (col),
   CONSTRAINT fkname FOREIGN KEY (col)
REFERENCES other_table(col_in_other_table),
   CONSTRAINT ucname UNIQUE (col),
   CONSTRAINT ckname CHECK (conditions)
);
```

Create Temporary CREATE GLOBAL TEMPORARY TABLE

Table tablename (
colname datatype
) ON COMMIT DELETE ROWS;

Drop Table DROP TABLE tablename;

Alter Table

Add Column ALTER TABLE tablename ADD columnname datatype;

Drop Column ALTER TABLE tablename DROP COLUMN columnname;

columnname newdatatype;

Rename Column ALTER TABLE tablename RENAME COLUMN currentname TO newname;

Add Constraint ALTER TABLE tablename ADD CONSTRAINT constraintname

constrainttype (columns);

Drop Constraint ALTER TABLE tablename DROP

constraint_type constraintname;

Rename Table sp_rename 'old_table_name', 'new_table_name';

Window/Analytic Functions

```
function_name ( arguments ) OVER (
[query_partition_clause]
[ORDER BY order_by_clause
[windowing_clause] ] )
```

Example using RANK, showing the student details and their rank according to the fees_paid, grouped by gender:

```
SELECT
student_id, first_name, last_name, gender, fees_paid,
RANK() OVER (
   PARTITION BY gender ORDER BY fees_paid
) AS rank_val
FROM student;
```

Subqueries

Single Row

SELECT id, last_name, salary
FROM employee
WHERE salary = (
 SELECT MAX(salary)
FROM employee
);

Multi Row

SELECT id, last_name, salary
FROM employee
WHERE salary IN (
 SELECT salary
FROM employee
WHERE last_name LIKE 'C%'

);
